

1) Find out the history of towers of Hanoi

2) Today from the morning 7:30 AM to 4:30 AM

list out various data structures you observed in surroundings

Ans) This puzzle was created by Edouard Lucas at 1883

There were 64 golden disks placed on three rods. we should move the disks from one rod to another following rules

→ only one disk can be moved at a time

→ A larger disk can never be placed on a smaller disk

→ only the top disk of a rod can be moved

He says that when the priests finish moving all 64 disks, the world will come to end. This is only a fictional story created to make the puzzle more interesting.

Ans) hostel room numbers - Array

Beds arrangement - Array

students waiting in the mess for breakfast - Queue

~~Hostel~~

class room seating arrangement - 2D array

mess token line - Queue

Computer folders & files - Tree

College campus map - graph

attendance register - Linked List
