

1) write c++ code which include class student
(function) find out the space occupied by object

```
#include <iostream>
```

```
using namespace std;
```

```
class student
```

```
{
```

```
String name 64; //32
```

```
int roll; //4
```

```
char grade; //1
```

```
public:
```

```
student()
```

```
{
```

```
cin >> name >> roll >> grade;
```

```
}
```

```
void display()
```

```
{
```

```
cout << name << endl;
```

```
};
```

```
int main() {
```

```
Student o;
```

```
o.display();
```

```
cout << sizeof(o);
```

```
}
```

Input

Neha

54

A

Output

Neha 54

40

String - 32

roll - 4

grade - 1

37

padding - 3

40 bytes
